

A Message from the President...

This summer, we will celebrate our twentieth anniversary as a survey/design firm.

Much has happened in the years since we were Boud Associates. Our client base has grown. Our service area has expanded from the Manchester area to cover Putnam to Sharon, Greenwich to Stonington. We have enjoyed the company and dedication of some of the most talented people in our industry. We have successfully completed almost 12,000 individual contracts. We currently have an active client base of several hundred firms and individuals. Many of them were amongst our first and still continue to look to us for our particular brand of high-tech, high touch solutions.

Over these years we have come to realize that our success as a firm would not be possible were it not for you, who turned to us in need of a survey or site plan, a consultation or report. One by one, it has been you, our clients and friends who have helped us to grow and prosper.

And after all is said and done, it is referrals from friends and satisfied clients that is the lifeblood of any service related business. If we haven't thanked you each personally, I would like to take this opportunity to do so. I also pledge to continue to be worthy of your confidence and to see to it that your friends and associates are as grateful to you for future referrals. Again, thank you from all of us at Meehan & Goodin.

Meehan & Goodin Engineers - Surveyors, P.C. Summer 2002 Newsletter

"Up on the Roof"

While we normally associate land surveying with measuring the surface of the earth, sometimes we are called upon to leave Terra Firma behind for other unusual venues.

Such was the case this spring, when the structural design of the new wing at **ECHN Manchester Hospital** required us to conduct a high precision steel anchor bolt layout, some 18 to 25 feet in the air above the work.

How Can We Help You Today?

- Site Planning
- Civil Engineering
- Land Surveying
- Permitting

- ◆ Richard Meehan, PLS
- ◆ Marc Goodin, PE
- ◆ E. Russell Johnston III, PE
- ◆ Robert E. Dahn, PLS
- ◆ Vernon S. Reed, Jr., PLS

Call us to see how we can assist you on your next project. (860) 643-2520

After Hours...

When he is not out in the field (or up on the roof) running a survey traverse - that's him on the cover - Felipe Silva just runs for the fun of it. Last November he was one of the 11,812 people who entered the 65th running of the Manchester Road Race. He was

joined by his daughter Samantha and several other extended family members who entered and finished the race.

On the Boards

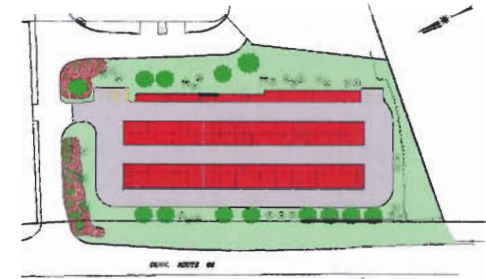

Continuing our long relationship with the Connecticut Department of Environmental Protection, Meehan & Goodin has been selected to design repairs to the existing fish passage facility at the **Sucker Brook Dam in Winchester, Connecticut**. The plans will also include the design and placement of a sediment trap to catch silt and soil before it reaches the reservoir.

Just Approved

The **Community Children's Center** daycare of **Mansfield** will be moving to their own new facility this fall. Shown above are some of the historic stonewalls traversing the site that the client wished to blend into the plan for future educational and recreational uses at the school. The site design was carefully prepared and executed to save the walls as well as other significant trees and features. Meehan & Goodin provided surveying and site engineering services as well as zoning and wetlands permit applications.

Under Construction

Meehan & Goodin prepared surveys, site plans, and applications for Zoning Regulation amendments as well as the engineering designs for a site plan for the proposed **North Windham Storage** complex. The project involves the building of 21,700 square feet of self storage units on a 2 acre parcel. The approvals have been granted, construction is well underway and a summer opening is anticipated.

Under Construction

The client, Conn. DPW, saw a building in need of demolition. Passers by at 340 Capitol Avenue saw a pile of rubble. We envisioned an efficient and functional parking lot. When time constraints and a parking crunch mandated an instant solution, we surveyed and designed a 163 space parking lot while much of the building was still standing or under demolition. By the time the dust had settled the design was completed and the plans were on the client's desk.
